

-  **Cost effective**
-  **AI Powered**
-  **Scalable**
-  **Easy to deploy**
-  **Searchable Meta Data**
-  **VMS Integration**

AerWatch® is a real-time situational awareness platform that turns your existing CCTV and building systems into actionable insight. Powered by advanced AI, it unifies information from cameras, access control, and other campus sources to put the right data in front of the right staff when and where it's needed so you can protect students and streamline day-to-day operations.

As school environments grow more complex, monitoring them can become fragmented and costly. **AerWatch®** simplifies this with a single, integrated view of the entire campus or district. Administrators gain continuous visibility across entrances, corridors, libraries, labs, playgrounds, and transport zones to support clear policies and faster response.

AerWatch® provides practical insight into attendance patterns and movement, helping track truancy, crowding, engagement hotspots, headcounts, and space utilisation for smarter timetabling and resource allocation. Intelligent analytics trigger real-time alerts for issues like after-hours presence, perimeter breaches, loitering, or unsafe congestion, enabling staff to act immediately. A continuously learning AI engine reduces false alarms so teams focus on what matters. Privacy-aware controls and seamless integration with your current CCTV/VMS make deployment straightforward and compliant.

AerWatch® Benefits for Education:

Measuring:

Accurate Students Counting

Students Engagement With Library, Computer Rooms, etc.

Facilities' Utilisation

Heatmaps Showing Students' Interaction Level

Detecting Threats:

Unauthorised Access

Trespassing

Loitering

Bullying & Aggression

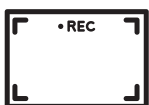

Vandalism & Defacing

IP Cameras

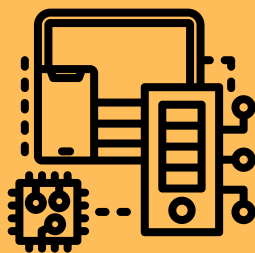

Existing VMS

Recorded Videos

Body-worn Cameras
