SECURING DISTRIBUTION CENTERS

INNERRANGE.COM

ABOUT US

Inner Range is a manufacturer and integrator of unified Video, Access Control and Security solutions. Founded in Melbourne, Australia, Inner Range has over 35 years of innovation and has more than 150,000 systems deployed globally.

We manufacture end-to-end solutions from the card you badge at one of our readers to the controller securing the door, right through to the enterprise security management software monitoring multiple sites anywhere in the world. Our scalable products are suitable for high-end residential, commercial and enterprise sites across verticals such as education, healthcare, government and critical infrastructure.

66

We are passionate about empowering our customers to protect what they value most, their property, their possessions and most importantly – their people.

99

Inner Range offers our partners a range of competency-based training courses to ensure the best experience with our products and outcomes for their customers. Additionally, our global support team ensures that any issues are resolved quickly with minimal impact to the end user.

From entry to enterprise, Inner Range provides an end-to-end security solution capable of addressing the most difficult building management needs, providing peace of mind for you and your people.

Our continual investment in research and development puts our products at the forefront of access control, security, video and smart building technology. We partner with best-in-class providers of adjacent technologies such as intercom, payroll, building automation and incorporate the latest in AI technology with solutions for facial recognition, biometrics, number plate recognition and many more. With over 130 native integrations to 3rd party systems and open integration pathways, we provide our customers with a unified system behind a single pane of glass.

SECURING DISTRIBUTION CENTERS

We are passionate about empowering our customers to protect what matters most their property, their assets, and most importantly, their people. Our scalable products are designed to address the unique challenges of distribution Centers, ensuring safety, convenience, and operational efficiency.

INNER RANGE FEATURES

- Multi-layered security approach
- Surveillance systems with high-resolution cameras
- Access control systems with biometric authentication
- Robust perimeter barriers
- Trained security personnel and regular patrols
- Collaboration with law enforcement agencies
- Emergency response protocols
- Integration of smart technologies
- Tailored security strategy to address specific vulnerabilities

CENTRALISED MANAGEMENT

CENTRAL MANAGEMENT OF ALL FACILITIES FROM A SINGLE SOFTWARE INTERFACE

Integriti by Inner Range delivers intelligent access control for Distribution Centers, securing key zones like loading bays, storage areas, and staff facilities. It integrates seamlessly with Wireless Room Key and Locker Management systems to streamline internal operations.

Vehicle access is managed via credentials or License Plate Recognition, ensuring smooth and secure entry.

INTRUSION DETECTION

Inner Range's access control system helps distribution Centers maintain strict control over who enters secure areas. By allowing only authorised staff, contractors, and vehicles to access designated zones, it reduces the risk of internal theft and operational disruptions.

Zone-based permissions and time restricted access ensure that sensitive areas like loading docks, inventory rooms, and server spaces remain protected at all times. This system also supports vehicle access management, streamlining the flow of deliveries and service vehicles.

IMPROVING CONCIERGE RESPONSIVENESS WITH VIDEO SURVEILLANCE INTEGRATION

As well as controlling all the Distribution Centers building access control sub-systems, site managers or operational staff can also monitor video surveillance within our software.

When a visitor enters the building, images from that camera covering the specific entry door can be displayed, monitored and logged. Freight and courier deliveries can also be verified by video, and access can be granted remotely.

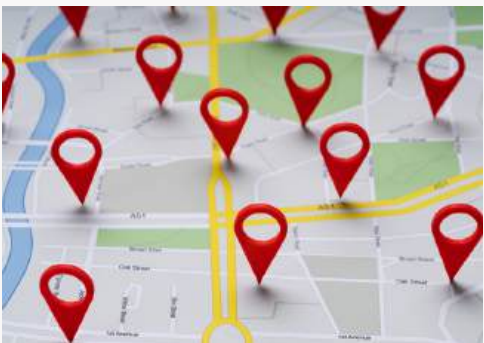

VIDEO INTERCOMS

Video intercoms enhance security at distribution Centers by allowing staff to visually verify and grant access to visitors and contractors. When access is approved, gates open automatically, lights activate in key zones, and service elevators are dispatched—streamlining entry and improving operational flow. Inner Range's integration ensures these actions are managed centrally for efficiency and control.

LIFT / ELEVATOR MANAGEMENT

Inner Range's Integriti platform provides intelligent lift and elevator control designed to streamline operations in distribution Centers. When a visitor, contractor, or delivery personnel is granted access at an entry point, the system can automatically dispatch an elevator to the ground floor. Once inside, access is restricted to only the floors or zones they're authorised to reach, ensuring secure and efficient movement throughout the facility. This integration not only enhances safety but also reduces manual oversight, allowing logistics teams to focus on core operations while maintaining tight control over vertical access.

RTLS & CONTRACTOR TRACKING

Track staff and contractors in real time across the site. Inner Range integrates with RTLS to improve safety and emergency response. By monitoring movements live, distribution Centers can ensure contractors remain in authorised zones, respond quickly to incidents, and maintain compliance with safety protocols. This integration also supports lone worker protection and mobile duress, enhancing visibility and control across all operational areas.

UNIFIED SOLUTION

Distribution Center are unique.

Distribution Centers face complex security challenges—from managing staff and vehicle access to protecting valuable inventory and ensuring operational continuity. Inner Range's integrated platform offers a unified solution that combines access control, surveillance, and automation to meet these needs.

LICENSE PLATE RECOGNITION

Video integration provides the ability to use LPR as a credential for gaining access to the facility. Associating the vehicle license plate to the users profile allows the system to open the carparking gates upon approach providing contactless entry to the premises. Many LPR solutions have already been integrated into the platform providing facility managers with a wide range of choices to best suit the application.

ACCESS CONTROL

Allowing the approved persons to be in the places that they need to complete their job is critical. But even more critical is preventing unapproved persons from accessing secure areas. This protects the people and assets of the organization and can also reduce other costs such as insurance. Integrating with systems like HVAC, lighting, and audio enhances physical security and helps cut utility costs.

WIRELESS LOCKING INTEGRATION

By integrating a Wireless Access Control solution, system operators can manage all system users through one software interface and do not need to manage multiple user databases across multiple systems. Synchronisation of users and access permissions through a single interface allows the management of the Wireless. Manage all doors—wireless and standard—on one platform.

INTERCOM INTEGRATION

Security & Access Control systems are often installed in conjunction with Intercom systems and it is of paramount importance that these systems are able to operate harmoniously together to create an exemplary end-user experience. Inner Range's interconnected technology platform allows for Security Personnel to easily monitor, manage, and control all intercom events from a single graphical interface.

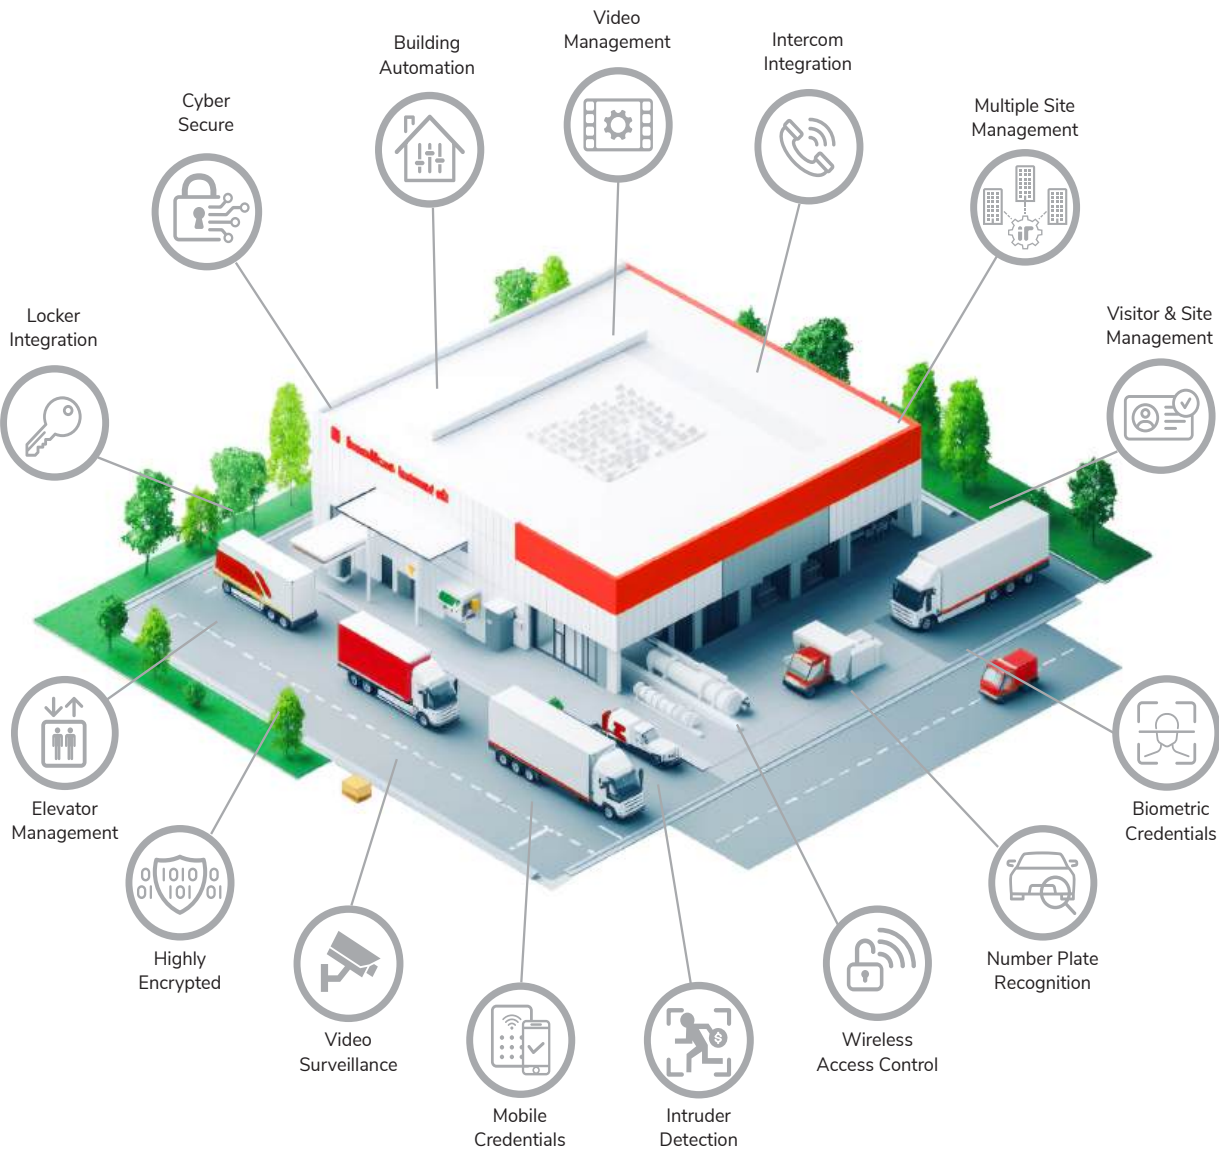

FACIAL RECOGNITION

Access to an area is controlled by what you have (card or other physical identification), what you know (code) and who you are (biometric identifier). Integration with a video surveillance system allows the analytics to be integrated with the access control application to provide the Who You Are component of access control. Camera analytics can identify individuals and use that as a credential for entry.

VIDEO SURVEILLANCE

Utilising the Enterprise Integrity platform, system operators are able to visually verify alarm events in real-time, using video feeds from an interconnected Video Surveillance platform. Security Personnel are able to view, control and customize Video layouts all within one centrally managed system, while monitoring other access control or alarm events within the same graphical interface.
