

AVIGILON™

Emergency Lockdown with Avigilon Alta Access

React to crises with confidence

In critical moments, seconds matter. Imagine facing a threat and having to make a decision: do you take shelter or scramble to lock doors? Those decisions could mean the difference between safety and harm for yourself and those around you.

Avigilon Alta Access puts safety at your fingertips so you don't have to choose. Take shelter and lockdown instantly, from anywhere. With a single tap on your phone, activate pre-determined protocols to secure specific areas, such as specific doors, floors, or buildings. Avigilon Alta Access ensures that safety is always within reach, even when danger is at the door.

Open architecture extends response capabilities

Trigger methods

Open architecture integrates cloud access with existing security devices, creating a smart, interconnected system. Combined with our intelligent rules engine, this allows security teams to trigger lockdowns through multiple methods including:

Native Triggers

Mobile app

Web interface

Card credentials

External Triggers

IoT device

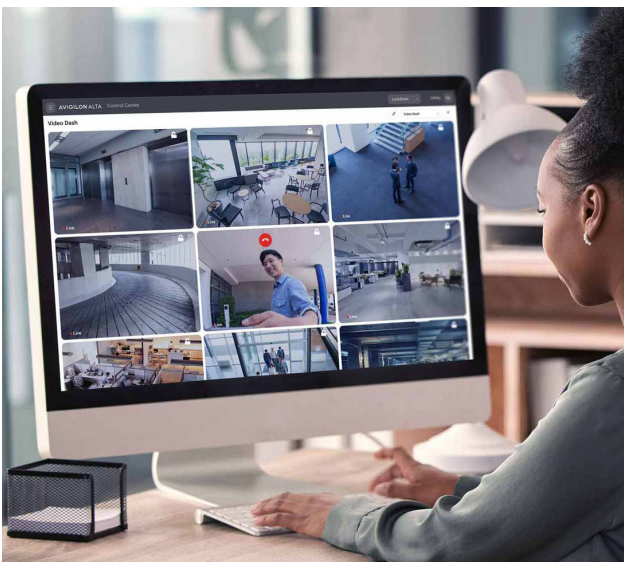

Wired button

Gunshot detectors

Integrated responses

Once a lockdown is triggered, our system can relay lockdown status to third-party systems like alarms or talk-down speakers for immediate notification. Software integrations like Rave Alert can instantly send mass notifications to provide occupants and first responders with critical, actionable information.

Monitor and respond faster with Avigilon Alta's security suite

Avigilon Alta unifies access control, video security and communications for a complete threat detection and response solution. Manage everything from a single, user-friendly cloud platform for benefits like:

- **Complete visibility:** See real-time, high-definition video feeds linked to access events to quickly identify threats, pinpoint incidents and respond with targeted lockdowns
- **Live occupancy data:** Real-time heat maps overlaid on interactive maps show security devices, people and vehicles to identify populated areas for coordinated emergency response
- **Advanced video analytics:** Avigilon AI video analytics provide greater accuracy to pinpoint and enable faster responses, even in crowded scenes

How it works

Alta can also integrate with the rest of the Motorola ecosystem through Orchestrate to automate workflows, like a lockdown triggering radio calls.

Beyond emergencies: Flexible access management for everyday events

While Lockdown is a crucial feature for emergencies, it also excels in everyday events. For instance, during school open houses, admins can use Flexible Lockdown plans to remotely unlock specific areas, overriding their normal schedule to allow parents and visitors access while keeping other areas secure. This flexibility transforms Alta Access from a purely security-focused tool into a dynamic system that enhances daily operations, making life easier for staff and more welcoming for visitors.

As security evolves, Avigilon Alta Access stays ahead of the curve

Motorola Solutions is a trusted leader in safety and security, continuously innovating connected technologies that enable organizations to overcome evolving challenges. Avigilon Alta's standard lockdown capabilities are available at no additional cost and are designed to help schools, businesses and other organizations quickly secure their facilities and help protect lives when an emergency arises. In a lockdown situation where every second counts, Avigilon Alta Access empowers you to make them matter.
