AVIGILON™

Touchless
unlock with
Avigilon Alta

Convenient hands-free entry without compromising security

Security is essential, but it shouldn't be a hassle. Wave to Unlock with Avigilon Alta offers a streamlined solution for managing access across homes, offices or gyms, ensuring a seamless and secure entry experience. As you approach the door, your smartphone is detected as a credential, offering multiple ways to enter without the need for physical keycards. This technology ensures effortless access for employees, residents, and visitors while maintaining robust security through your smartphone's built-in features.

Wave to unlock

A simple wave in front of the reader triggers authentication via Bluetooth Low Energy (BLE), even with your phone in your pocket. This keeps traffic flowing to reduce congestion at entry points.

Automatic doors

Get more convenience with an integrated automatic door opener. Avigilon Alta is compatible with existing electrified doors, including Allegion models, for a fully hands-free experience.

Flexible mobile options

In addition to hands-free unlocking, users can also leverage additional mobile access methods, such as tapping their phone on the reader or unlocking entries through the app.

Dependable, user-friendly security

No matter your entry method, our patented Triple Unlock technology guarantees fast and reliable mobile access by sending unlock requests via BLE, Wi-Fi and cellular data simultaneously—even without internet connectivity. By ensuring seamless access, Alta Access redefines traditional security and creates a modern, frictionless environment that will impress everyone who walks through your doors.

The wave-to-unlock feature works seamlessly. It's like magic.

– Mark Fitzpatrick, CTO at the Reagan Institute
