

One unified security platform, unlimited possibilities

A global view of your security environment in one single interface designed for improved awareness and efficiency

See the big picture

Genetec™ Security Center is a unified platform built from the ground up as one intuitive and modular solution. Everything from IP video surveillance, access control, and automatic license plate recognition (ALPR) to intrusion detection and communications works in sync, right out of the box. This truly unified approach helps your organization increase efficiency, enhance decision-making, and confidently respond to any situation.

One platform. Endless advantage.

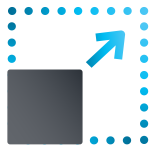

Unified for total control

Security Center is the simpler, smarter way to stay in control. Unify core security systems such as Omnicast™ video management, Synergis™ access control, and AutoVu™ ALPR. Add intrusion detection, intercom, and other business systems as needed, with everything in one pane of glass.

Built for peace of mind

Security Center is built with cybersecurity and privacy in mind. Stay ahead of evolving threats without sacrificing uptime or performance. Built-in failover and redundancy features keep operations running smoothly and other advanced security mechanisms help uphold privacy.

Designed for growth

Security Center is flexible and built to scale. Implement Genetec modules and third-party add-ons as your needs evolve. Expand to thousands of cameras, doors, intercom devices, intrusion panels, and IoT sensors. The platform's open and robust architecture means you're never boxed in.

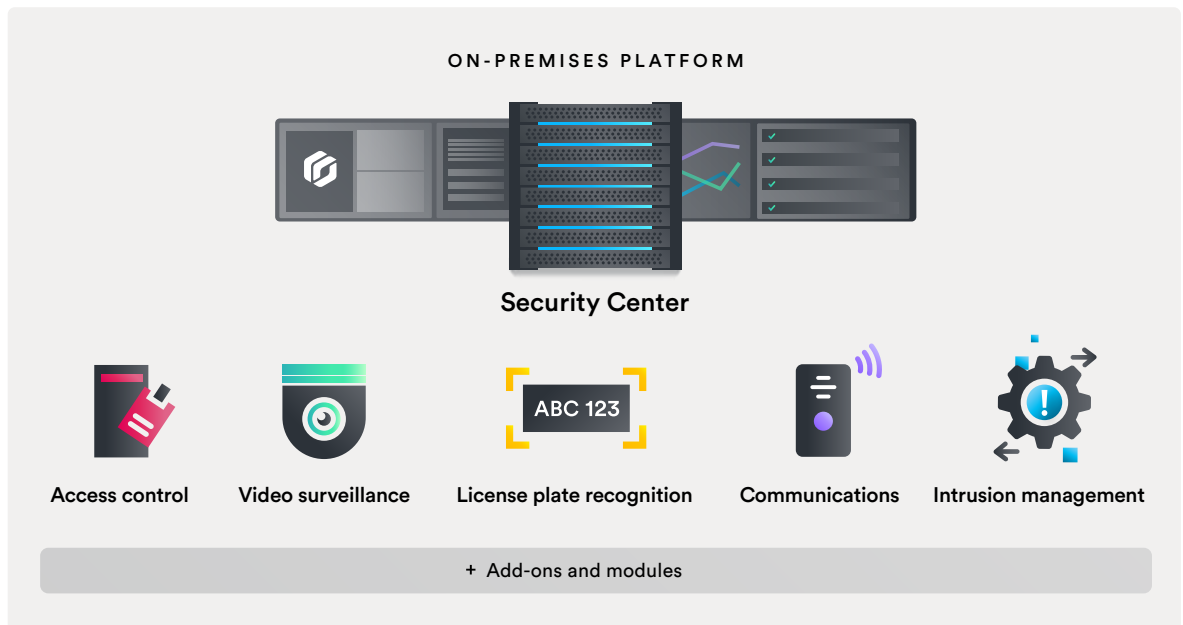

Optimized for savings

Security Center streamlines system deployment, maintenance, and training, lowering upfront and ongoing costs. One platform means less infrastructure to install, fewer systems to maintain, and faster productivity. Updates and vendor support are not just easier; you avoid the hidden costs and compatibility issues.

Step up to a solid foundation

At the core of Security Center are Omnicast, Synergis, and AutoVu—our video management, access control, and ALPR solutions. You can further strengthen your security and operations with powerful modules, purpose-built add-ons, and compatible integrations with third-party security devices and systems. With a unified, open platform, everything works together. You get greater visibility, stronger cybersecurity, easier maintenance, and room to grow. That adds up to big efficiency and cost savings in the long run. No more headaches managing disconnected solutions. Just one robust platform that evolves with you and keeps everything working in sync.

At the core of your security and operations

Omnicast

Get eyes on every corner of your organization. Deploy a video surveillance system tailored to your needs and budget by choosing from a wide range of IP cameras, including those with HD video, analytics, and privacy protection.

Synergis

Be ready to respond the moment threats reach your doors. Build an access control system that fits your requirements by keeping some existing devices or by adding the readers, controllers, electronic locks, and the credential tech you prefer.

AutoVu

Keep tabs on every vehicle entering and exiting your facilities. Automate license plate reading and identification with fixed and mobile ALPR systems to extend your physical security from your doors to your perimeters and parking lots.

Get the click, click, done experience

Security Center is unified by design, not stitched together. Operators get a complete view of your entire security environment from a single, powerful interface, whether at a desk or in a control room. The platform instantly correlates all system data and displays live events in real time. That means your team can easily see what's happening and respond fast so operations keep flowing without a hitch. With everything connected and at their fingertips, operators stay confident and in control, no matter what comes up.

A Handle it all with a multi-task view

Perform monitoring and reporting tasks in multiple tabs so you can quickly jump between them and easily handle your many jobs.

B Make video calls from one place

Place a video call to another operator or answer an incoming call from an intercom station directly within the Security Center interface.

C Stay in control with interactive maps

Monitor your facilities with interactive maps that show security cameras, doors, and alarms alongside real-time events and status updates from one dynamic view.

D Vet cardholder identities in real time

Link door activity with nearby cameras to quickly verify cardholders' identities, matching photos against live or recorded video.

Stay connected, wherever you are

Security Center keeps your team connected—whether in the field, at the front desk, or in a C-suite meeting. Our mobile app puts essential security functions in your hands, so anyone with assigned permissions can monitor, respond, and collaborate on the go. The lightweight web app also provides secure, role-based access through any browser, making it easy for staff and stakeholders to oversee incidents without a full workstation setup. These tools ensure that wherever the job takes you, you'll be ready.

A See beyond the SOC

The Genetec Web App gives you complete control from anywhere, anytime. Monitor your video, access control, and alarms, respond to incidents in real time, and view unified reports all from an intuitive browser-based app.

B Get peace of mind on the go

Genetec Mobile keeps you connected from any location. Respond faster with in-app calls, messaging, and alerts, and benefit from continuous innovation with smooth upgrades that don't impact operations.

Comprehensive features overview

Unified security platform

Fully-embedded access control, video, and ALPR
Access to a broad ecosystem of IP devices and partner add-ons
Unified video analytics and privacy masking
High availability with built-in failover or third-party solutions
On-premises and cloud deployment options
Connected services (software and firmware updates and system health monitoring)

Architecture

IP-based security platform
Distributed, client-server, multi-site architecture
Compatible with third-party virtualization solutions
Software Development Kit (SDK), Web API, and tools
Embedded health monitoring, statistics, and reporting engines
Microsoft Active Directory user synchronization

Core modules

Real-time map-based monitoring to view and operate doors, PTZ cameras, intrusion areas, and intercoms
SIP-based communications (Sipelia™)
Unified security with intrusion panels
Unified video analytics and privacy protection
Unified intuitive web interface (Genetec Web App)
Unified mobile applications for smart devices (Genetec Mobile App)

User experience and interface

Single task-based application for monitoring and unified reporting
Live dashboards
Dedicated configuration application
Interactive map-based monitoring that supports geo-located maps, ArcGIS data, and custom floor plans
Dynamic visual reporting with graphs, charts, and histograms

List management

Hotlist/permit updating via SFTP/FTP
Third-party integrations for pay-by-plate and permit management
User definable hotlists
Covert hotlists

Federation™

View remote, independent sites as a single system
Multi-site and system monitoring and reporting for video, access control, intrusion, and more
Global cardholder management
Centralized reports across locations
Consolidated alarm management
Backward/forward compatibility between sites

Threat level management

Pre-defined organizational threat levels and actions
Altered system behavior based on the active threat level
Programming of trigger actions within the platform, including for video and access control
Locking of doors, restricting access, or going into a complete lockdown
Controlled PTZ cameras and changed recording settings

Cybersecurity and privacy protection

System partitioning to control what users can see
Extensive set of user-access privileges
End-to-end data, video, and communications encryption
Claims-based authentication and Active Directory
Active Directory Federation Services (ADFS) support
Firmware recommendation notifications
Digital certificate support for the Directory
Password strength meter

Partner add-ons

Elevator dispatch and building automation
Industrial internet of things (IIoT) integration
Perimeter and fence protection, radar, and laser systems
Intrusion detection systems
Gunshot detection and audio analytics
Parking management and payment systems
Biometrics and third-party access control systems
Video analytics, facial recognition, forensic search
Asset management and tracking, and ID scanning

Security Center packages

Security Center is available in two different packages. Consult the table below.

Packages	Standard	Enterprise
Security Center (included in base)		
Video management (Omnicast™)	●	●
Access control (Synergis™)	●	●
Automatic license plate recognition (AutoVu™)	●	●
SIP-based communications (Sipelia™)	●	●
Intrusion management	●	●
Client connections (Security Desk, Web App, and Mobile App)	5	Unlimited
Max. number of cameras	50	Unlimited
Max. number of readers	64	Unlimited

Additional features

Threat level management	N/A	●
Dynamic mapping	N/A	●
Support for GIS maps	N/A	●
Active Directory integration	N/A	●
Authentication support (ADFS, OpenID Connect/SAML2)	N/A	●
Failover Directory	N/A	●
Remote Security Desk	N/A	●
Federation™ support*	N/A	○
Record Fusion	N/A	○
SDK connections	○	○
IIoT integration	○	○

● Included ○ Optional *Federation host must be Enterprise. Federated sites can be Standard or Enterprise.

Build your system your way.
