

Snapshot Plugin

Applications:

Video Surveillance · Access Control
Automatic License Plate Recognition

Automatic snapshot of all selected cameras

The Snapshot plugin will periodically take a snapshot of selected cameras. The snapshots will be saved in the location of your choice.

The Snapshot plugin can take snapshots based on a configured interval or a custom event, according to selected schedules, image formats and video stream settings.

Key features

Take snapshots based on a configured interval or a custom event

Take snapshots from any number of cameras

Take snapshots at the interval of your choice

Take snapshots according to a particular schedule

Choose between Bitmap and JPEG image formats

Call-up PTZ Camera presets
