CAD/RMS Integration

Save time with auto-populated data

When working on a case, it's essential that the information you need is easily accessible. By integrating your investigation management solution to your Computer Aided Dispatch (CAD) or Records Management System (RMS), you can review all digital evidence and associated incident data from a single application.

Officers can quickly search for digital evidence in Genetec Clearance™ by matching incident data from existing systems to cases in the app. This also eliminates the need to manually enter CAD/RMS information and reduces risk of entry error by auto-populating fields in the case view.

Industry:
Law enforcement

Applications:
Genetec Clearance

Category:
Operations

Key benefits

- Save time by decreasing manual data entry
- Reduce human error with auto-populated fields
- Improve visibility with CAD/RMS incident mapping

How we help

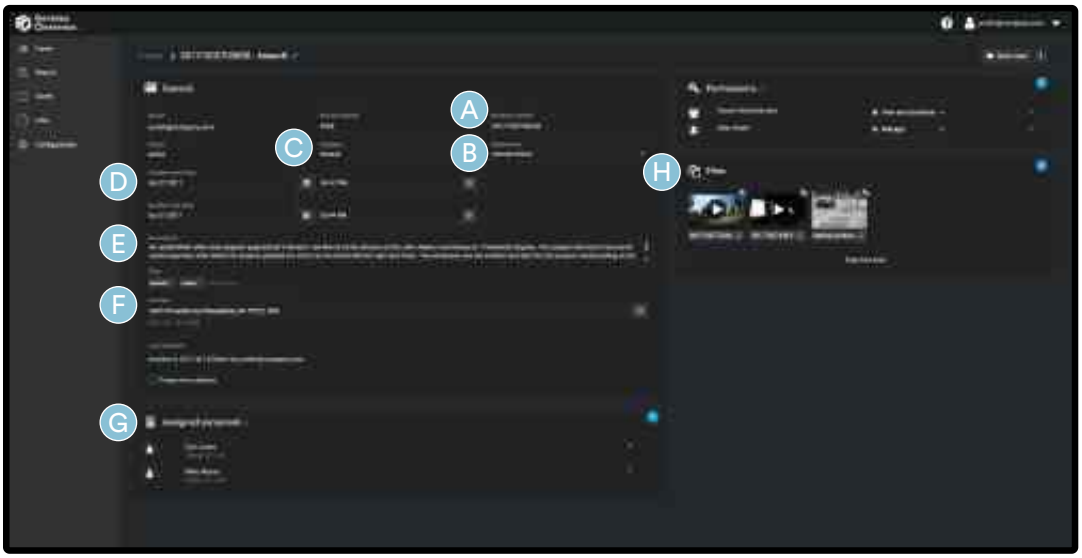

System integration: Integrate to existing CAD or RMS. Through reoccurring export from your CAD or RMS, data is automatically uploaded and associated to cases in Genetec Clearance.

Incident mapping: Visualize incident location patterns with a map overlay of CAD/RMS data. Filter by incident classification to get a quick view of regions where certain crime is more prevalent.

Auto assignment: Automatically assign body camera recordings to cases based on the responding officer and start/end time of the reported CAD/RMS incident.

Quick search: Locate a case in Genetec Clearance using the CAD/RMS incident number, category, start/end time, location, call narrative, and other fields.

Multiple fields can be auto-populated directly from your existing CAD/RMS system.

- A Incident number
- B Case assignment
- C Incident classification and retention policy
- D Incident start and end time
- E Call narrative and case notes
- F Location
- G Assigned officers, shield numbers, unit times
- H Body camera recordings are automatically associated to the case based on the responding officer and the incident time
