

AXIS People Counter

Smart analytics for people counting

AXIS People Counter is a cost-efficient, scalable and proven video analytics application for people counting. Installed in a ceiling-mounted network camera in a doorway, this application enables reliable two-way counting of people in both directions simultaneously. This allows for an analysis of customer flows, which can be used to improve staff and store planning, as well as evaluate marketing efforts and conversion rate if combined with point-of-sale data. AXIS People Counter stores all counting data directly in each camera for easy access through the camera's web interface or in AXIS Store Reporter, which provides a clear graphical representation of the data.
