

AutoVu Flexreader

Server-based automatic license plate recognition solution

Transform video surveillance cameras into powerful ALPR units

Whether you're looking to support investigations, unlock new insights into your operations or streamline processes, automatic license plate recognition (ALPR) provides valuable data on vehicle and visitor behavior. Gaining access to this information has traditionally required you to buy dedicated devices, which provided more capabilities than some applications need. AutoVu™ Flexreader™ is a new server-based ALPR solution that provides a cost-effective option for automatically identifying and tracking vehicles that access your premises, using IP video cameras supported by Security Center.

Optimized for applications with vehicles moving up to 30 MPH (50km/h), AutoVu Flexreader provides accessible ALPR within the unified Genetec™ Security Center platform. This ALPR module allows you to take advantage of a broad range of data-mining tools and graphical reports to gain meaningful operational insight from license plate data.

Why choose AutoVu Flexreader:

Fits in any budget

Use existing infrastructure, or leverage affordable security cameras, and finally add ALPR to your system with a cost-effective solution.

Flexible

Choose the right camera for your needs. This new solution works with suitable IP video cameras supported by Security Center.

Fully-featured

Don't compromise. Get access to a complete set of graphic ALPR reports and list management features offered by Security Center AutoVu.

Applications

Proactive security – Identify potential threats as soon as they enter your facilities. With the extensive list of management features provided by AutoVu, every vehicle is automatically identified and classified. Unknown or suspect vehicles can then trigger specific alarms and activate video surveillance recording, helping you react immediately.

Automated vehicle processes – Enhance your employees' and visitors' experience. Open vehicle gates and garage doors as soon as authorized vehicles arrive, or instantly notify staff of the arrival of suppliers and visiting VIPs.

Forensic investigations – Resolve incidents faster. Provide your investigators with detailed vehicle audit trails, including license plate number, date, time, coordinates, vehicle brand, and license plate origin. Included advanced reports, such as multi-zone correlation searches, allows you to identify vehicles detected at multiple sites or lots.

Operational improvement – Unlock new insights in the behavior of vehicles and visitors accessing your facilities using the data collected. Easily track travel time between locations, recurring visitors, length of stay, peak hours, and more.
