

Security Center Web Client

A thin client for everyday security operations

The Security Center web client helps you take control of your security system, no matter your location. Monitor your security system while away from your workstation on an application that is compatible with multiple browsers.

Access core video surveillance, access control, and automatic license plate recognition functionalities. Control PTZ cameras, monitor license plate reads, view reports, respond to alarms, and more.

Applications:

Video Surveillance · Access Control

Key benefits

Remotely monitor your security system from any computer

Control PTZ cameras, view alarm reports and export video clips

Create and manage access control cardholders, credentials and access rules

Review ALPR events and add new license plates to your monitoring list

No additional plugins or software required

Key features and specifications

Unified security:

Operators can monitor live and recorded video, review access control events, and get ALPR reads from anywhere.

Manage cardholders:

Create and manage cardholders, credentials and access rules and assign them to partitions.

Control PTZ cameras:

Control your PTZ cameras through intuitive controls, and PTZ presets.

Query system alarms:

Rapidly search for system alarms and view associated video.

Bookmark video of interest:

Add bookmarks to tag video and easily retrieve bookmarked clips later on.

Remotely unlock doors:

Lock and unlock doors to respond to entry and visitor requests.

Export video clips:

Export video of interest from the web client, including watermarks and encryption, and save clips to your local system.

Support for H.264 streaming:

Support more streams per individual server and use less bandwidth.

Visitor management:

Create new visitors and manage them by checking them in and out of the system.

Manage license plate hotlists:

Add new license plate numbers to your hotlists and be alerted if a suspect vehicle comes back to your premise.

Threat level management:

Change the behavior of your security system in response to changing security conditions and potential threats.

Alarm management:

Monitor and manage real-time alarms. View associated video, trigger and acknowledge alarms.

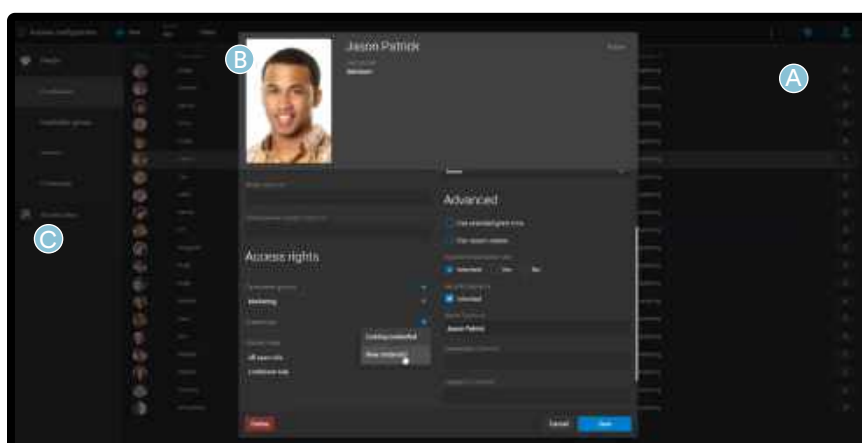

Web Client screenshots

Monitoring task
