TERMS & CONDITIONS

Event driven triggering means the camera is associated with an input which when triggered sends video to an operator for review. Event triggered video monitoring also requires a compatible alarm monitoring service. Analytic triggering means that an AI analytic on the camera edge triggers & sends video to an operator for review. Only the use of deep learning analytics may be used as a trigger. VMD & heuristics are not allowed. Heuristics being defined as hard-coded human-defined rules such as "ignore pixel changes that only last 2 seconds" etc. Any camera that is triggered more than 10 times in a month will have a cloud based people and vehicle object detection analytic applied to it for false alarm filtering. This analytic will be charged at \$16 per camera per month. No data hosting or cloud service charges. Customer to provide internet connection with upload/download speed of 10MB/10MB.
